Office swivel chair  
for agile working

Move your life

## People spend more time sitting than sleeping.

While a comfortable bed is important for your health, studies show that you actually spend a lot more time sitting in a chair than lying in bed. At Vaseat company we are fully aware of the effects that sitting for long periods of time has on the body and have designed the world's most innovative seats to meet these needs. Millions of people will spend most of their days in the company of our products. Now, it's your turn to try out our seats!

Tailor-made for you  
because you are unique

**OFFICE**

There are two main systems that are affected by sedentary behavior in the office: the spinal system and the circulatory system. Generally speaking, prolonged sitting can significantly increase the pressure on the lumbar spine and cervical spine. Because the stability of the thoracic vertebra is better, the effect on the thoracic vertebra is very small, unless the posture of the chest holding the chest is more serious, and eventually lead to chest and low back pain, sitting for a long time will lead to lumbar disc herniation and cervical spondylosis. This prolonged sitting can have a very negative effect on the circulation system.

Movement is very important

People need to do proper exercise in the course of work to mitigate the above hazards. Soothing on a chair consists of just two elements. The first is rocking, where the body relaxes the muscular column system. The second is that swinging the body relaxes the muscular system of the whole body and promotes blood circulation at the same time. The sway of the seat surface of the Ivor chair can make people swing in coordination with the hips and the chair surface when they do the first action, and maintain the balance of pressure on the legs, and keep the blood more smooth.

outstanding liquidity

The swing function of the back of the chair can make people do the second movement, keep the back of the chair and the human body back a complete fit, reduce muscle tension, the swing movement may bring muscle strain, play a supporting and buffer role.

be enjoyable

## Healthy work creative aesthetics

Ergonomics is the core element of creating healthy work. Only by integrating the product appearance design and texture performance with ergonomic function can we master the advanced sense of the product and create a new aesthetics of healthy work with a balanced body and mind for users.

Minimalist design. At the same time, intelligent details, which are crucial, are guaranteed to impress when working with agility. Good posture and comfort ensure in every sitting position and every movement.

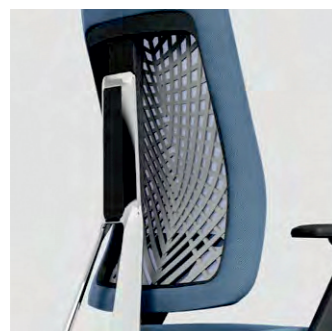

Armrest: 3D fully adjustable armrest, suitable for different posture needs, can give better support for the hand.

Headrest: It can be adjusted up and down to meet people of different heights. It can be switched between two modes, the headrest mode is used for intense work, and the headrest mode is used for communication or naps, which can support the neck and head in full rotation.

Mechanism: seat height adjustment, adjust the seat to a comfortable height at any time, say goodbye to bad sitting posture; negative three-degree adjustment of the seat, open the best working mode, give you healthy physical fitness and scientific viewing distance experience; five gears on the back Tilt locking, giving you maximum stretch comfort; Tilt resistance adjuster, large torque, simple and easy to operate, friendly to face all kinds of users.

Back: up and down adjustment, suitable for different postures; The lower and outward tilt adjustment can provide better elastic support; the left and right tilt adjustment can meet the dynamic sitting posture, and the chair can move with it;

Seat: The seat depth can be adjusted back and forth, which not only meets the health of the short seat, but also meets the extension needs of different body types.
